## Modern mechanical blinds

BLIND IQ is automatic shading system equipped with smart sensors and artificial intelligence for maximum light and temperature comfort in your interior

With zero consumption  
in stand by mode

# Blind-

BLIND IQ is a modern and elegant solution in the form of a wire-operated blind with electronic control without complex mechanical elements.

It lets only as much light into the house through the windows as you need for your visual comfort, for example for working from home. You can also playfully simulate your presence during your holidays.

The blinds can be wired in two- or three-wire, with the two-wire connection emulating a classic DC motor.

The end positions of the blades have a beautifully smooth range due to the fact that they are electronically designed so that the system gradually reduces the motor speed before reaching them.

After starting, the speed of the blades is temporarily reduced to allow the user to adjust their precise tilt.

The position of the slats is controlled by a microprocessor and position encoder and the louvre safely remembers the position even after switching off.

The most economical mechanical blinds on the market

Zero consumption in stand-by mode

Extremely quiet and economical operation

Possibility to connect to a smart home system

Dimensions up to 4 x 4 metres  
Extended 3-year warranty
